Longitude	44.83368
Latitude	41.69411
Start of Commitment	2015-10-16
End of Commitment	2017-01-31
Currency	EUR
Status	OECD approved

#### Description

Improving water protection, and water and waste management is one of the main priorities of the country due to the current critical situation in this sector. In addition, an Association Agreement has been signed with the EU. The critical situation has been confirmed via information from the Ministry of Regional Development and Infrastructure of Georgia, the Ministry of Environment and the Georgian project partner NALAG. They confirmed the urgent need to address the cleanliness of waste water and the building of waste water treatment plants. The country is in a critical state in this domain, with a poor infrastructure and very low level of management. It is vital that the water sector increases its utilisation of foreign investments, EU and EBRD funds and the application of their methodologies in the planning and management of projects. This is crucial for the improvement of the current situation and the implementation of EU directives and requirements to improve the living conditions of the population. The effective management of water sector projects in Georgia, based on the EU and EBRD methodologies, is therefore the main objective of the project. In order to achieve this, it is necessary to build up the adequate capacities in Georgia. Capacity building for the management of projects in the water sector at the municipal level is therefore the specific objective of the project, under the expected upcoming reform of water management and the expected transfer of competencies from the central to the municipal level. The results of the project are divided into six parts: 1.1 Analysis of the input data and development of detailed methodology for the achievement of the project results, in English. 1.2 Manual Part A - Methodology of projects under the terms of the EBRD, in English. 1.3 Manual Part B - Methodology of projects under the terms of the EU, in English. 1.4 Manual Part C - Methodology of water projects for EIA assessment (Environmental Impact Assessment), in English. 1.5 Manual Part D - Methodology for audit trail and comments on existing public procurement law, in English. 1.6 Twenty trained representatives in municipal government, NALAG and the relevant ministries. 72 informed municipal units, two
