Geo Location	Republic of Kenya, KE
Longitude	38.0
Latitude	1.0
Start of Commitment	2021-08-04
End of Commitment	2023-09-30
Currency	EUR
Status	OECD approved

Description

The main reason of establishing Dr. David Roden Tikit Mission Health Centre is that until now people from remote areas of the savannah had to travel four days on foot for getting healthcare. The severely ill did not survive the journey and the slightly ill preferred to be treated at home. The centre has been operating since October 2019 and is a rescue centre for patients, but due to the lack of resources, it provides only very basic healthcare without any devices and equipment. The main goal of the project is to improve the health of the population in the Masol area with an emphasis on mothers and children. We specifically want to

- Reduce dramatic maternal and neonatal mortality rates in the region (from the current 20% to 5%)
- Increase the number of cured patients to 6,600
- Work systematically with the community and folk excitors (people performing female genital mutilation (FGM)) to understand the risks and consequences of FGM and offer them an alternative (450 trained community members)

PROBLEM 1: Insufficient quality of health care
Solution:

1. reconstruction of existing premises and establishment of missing departments of the centre, purchase of instruments and equipment
2. employment of a laboratory assistant and anaesthesiology nurse
3. supplying the hospital with medical materials and medicines
4. Outreach program _diagnostics and treatment of patients in remote areas
5. Safe childbirth program_ distribution of childbirth sets
6. Provision of neonatal packages (equipment for new-borns) for women giving birth in the hospital.
7. eco program for the hospital incinerator, collection of rainwater, solar system, prevention of soil erosion in the hospital area -planting 100 trees.

Result 1: Providing improved environmentally sustainable healthcare for all people, including men and the disabled, with an emphasis on women and children (6,600 patients)

PROBLEM 2: Poor medical equipment and staff training. The healthcare staff in the area is not sufficient and has only a basic compulsory education. Low position of dispensary in the hierarchy of the Kenyan health system.
Solution:

- training of medical and non-medical staff
- Reprofiting a dispensary facility to a medical center

Result 2: Building the institutional and personnel capacities of the health center

PROBLEM 3: Violations of Human rights, female genital mutilation (FGM) and inaccessibility of health care for women. 97
