| Start of Commitment | 2021-08-04 |
| End of Commitment | 2023-06-30 |
| Currency | EUR |
| Status | OECD approved |

Description

The project proposal aims to improve education process in Kenya in response to the ongoing extensive educational reform in the country. The aim of the project is to increase the amount of young people with quality primary and secondary education – by introducing quality education in agricultural and environmental studies as well as by advancing and completing the construction of a junior high school. The project is designed for 540 pupils of the St. Philip Neri Elementary School who currently do not have any access to agricultural or environmental studies and who also have very limited access to secondary education. If approved and implemented, the project expects launch of secondary school courses for 80 students. As a result, their know-how and skills will be vastly improved which will result in their higher future competitiveness at the labor market (or in case of further university education). Result 1: An elementary school providing quality education including practical and innovative courses of agricultural and environmental studies. A school field with irrigation system will be created to provide ideal opportunities for practical education for 540 students. Courses for grades 1-3 will combine environmental consciousness with agricultural activity. Grades 4-6 will be provided a more detailed overview and practical skills in crops farming. Result 2: Provision of quality and modern secondary education – Junior High School for the elementary school pupils. Local partner will oversee the construction of 4 classes within the elementary school campus designed for the Junior High School. A combination of an elementary school and a junior high school is a necessary precondition based on the recently approved complex educational reform in Kenya. 80 students (40 girls and 40 boys), including at least 10 handicapped students, are expected to enroll in the first year of this inclusive junior high school. The following activities will take place to achieve the planned results: • Foundation of a school field with irrigation system for agricultural and environmental studies as well as purchase of necessary equipment for practical education • Recruitment of 2 teachers – one each for agricultural studies and environmental studies • Elaboration of syllabi

Commitments and Amount Extended (EUR)

| Reporting Year | Commitments | Amount Extended |
|----------------|------------------|------------------|
| 2021 | 200 000 € | 120 000 € |
| 2022 | 0 € | 60 000 € |
| Total | 200 000 € | 180 000 € |
