Longitude	32.0
Latitude	49.0
Start of Commitment	2022-08-10
End of Commitment	2023-05-21
Currency	EUR
Status	OECD approved

Description

The main goal of this project proposal is to improve the physical and mental health of the population at risk of armed conflict in Ukraine. Specifically, the project focuses on: 1. Improving access to basic healthcare for people living near armed conflict zones 2. Raising mental health awareness and improving access to mental health care 3. Increasing the competence of local doctors in providing urgent pre-hospital medical care to those injured in an armed conflict The beneficiaries of the project are residents of the eastern regions of Ukraine, living in relative proximity to the ongoing conflict. These are locals, especially from vulnerable groups - excluded communities, the elderly, people with disabilities or reduced mobility - who have severely hampered access to health care, as well as internally displaced people fleeing the war from the most affected areas. In total, the project will provide healthcare to 7,040 patients, 600 people will be actively involved in mental health workshops, 800 psychotherapeutic consultations will be conducted during the duration of the project and 100 doctors will be trained in providing pre-hospital emergency care to victims injured in armed conflict. The project will achieve the following results: Result #1: Affordable health care in the affected area The implementation of the project will provide healthcare to 7040 patients, mostly from vulnerable groups, of which min. 70% are women. Affordable quality health care will improve the health of the population and reduce the future risk of disability resulting from failure to address health problems at the onset. The provision of medical treatment as well as follow-up care will also reduce the financial burden on the patient and his/her family, which may have a positive impact on the higher resilience of the whole family. Result #2: Increased mental health awareness The project will raise awareness of mental health, its importance and needs, as well as warning signs and when it is necessary to seek professional help. Mental health is an integral part of the overall health of the population. Education about its importance leads to a higher level of care for the mental health of the individual, but also his/her immediate surroundings. Such primary prevention leads to a lower
